Introduction

Introduction

This publication contains results of the Average Earnings Information System (AEIS). The source of AEIS is a “Labor Costs Information System“. It is a regular statistical sample survey of pay level, which quarterly monitors the average hourly earnings, paid earnings and working time of particular employees. The survey is a part of the Program of Statistical Surveys announced by Czech Statistical Office (CZSO) and published in the Collection of Laws every year (see appendix 1 and 2 of Decree No.470 in the Czech Collection of Laws, article 163 dated November 19, 2002 setting the Program of Statistical Surveys for year 2003). The survey is conducted by state statistical services of Czech Ministry of Labour and Social Affairs. The survey procedure and AEIS development is managed by a commission, which consists of representatives of Ministry of Labour and Social Affairs, Ministry for Regional Development, Czech Statistical Office, CERGE-EI, VSE – University of Economics Prague, Czech-Moravian Confederation of Trade Unions and Czech Confederation of Industry. The AEIS is carried out by Trexima, Ltd. Zlín (www.trexima.cz).

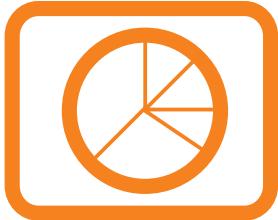

AEIS outputs provide another source of information on earnings in Czech Republic. CZSO reporting as a traditional source of earnings information gathers the data on average earnings from the information on the total sum of earnings and total recorded number of employees in the economic entity. Thus CZSO publishes average earnings by firm characteristics. On the other hand the main goal of AEIS based on individuals' data is to estimate average earnings by occupation. Thus, the statistics of earnings levels in each particular occupation (in classification CZ-ISCO) is the primary result of AEIS. Furthermore, AEIS gives information on estimated earnings parameters of Czech labor force. This publication contains operative results of AEIS, which have been divided according to employers' and employees' characteristics. The AEIS yearly findings of gross earnings and time worked constitute a basis for CZSO structural earnings survey and for EUROSTAT survey SES (Structure of Earnings Survey). While the results of both, CZSO structural earnings survey and AEIS survey, come from the same basic data source and the publications supplement each other, there is important to take into account the different sample sets used and the different methodology of earnings estimation when comparing results of CZSO reporting and AEIS.

The AEIS publication shows average hourly earnings for current quarter, monthly gross earnings for a period from the beginning of the year till the end of current quarter, information on time worked and not worked for the same period and finally information on development of average hourly earnings. The results are divided according to law, which economic entities apply in their remuneration systems. The first part of the publication provides results for the business sector (economic entities, which apply Act No. 1/1992 Coll. on Wages, Remuneration for Stand-by, and Average Earnings). The second part of the publication summarizes results for non business sector (organizations, which apply Act No. 143/1992 Coll. on Salaries and Remuneration for Stand-by in Budgetary Organizations and some other Organizations and Institutions).

The publication can be downloaded in either Excel or PDF format from the web pages of Ministry of Labour and Social Affairs (www.mpsv.cz), section *Příjmy a životní úroveň (Income and Living standard)*. The review of particular occupation is given in line with a publication criterion according to which there can be published just occupations which have been represented at least by one percentage point in particular main classes of CZ-ISCO classification. The complete list of occupations examined can be found at www.trexima.cz/vysledky.

More detailed information on earnings level by occupation and particular regions is brought by “Regional Statistics of Labor Costs” (RSCP) conducted by employment services administration of Ministry of Labour and Social Affairs. Publications on particular regions can be found on web pages of Ministry of Labour and Social Affairs www.mpsv.cz, section *Služby zaměstnanosti (Employment services)*.

Ministry of Labour and Social Affairs would like to express gratitude to all survey respondents for preparation of input data for survey purposes. It is possible to regularly publish this publication just through a thorough approach of respondents and their conformance with the deadlines.

Technical annex

- technical description of survey

Technical Annex – technical description of survey

This part presents basic information on survey framework, methodology used in data collection, data analysis and creation of output set-ups for AEIS publication. Annex consists of following three main sections: survey framework, AEIS data collection methods, and data processing and analysis.

Survey framework

This part gives information on the coverage of AEIS survey, sample frame and selection of economic entities into the sample.

Coverage of AEIS survey

There are 3 061 economic entities representing approx. 1 295 thousands employees included in the AEIS statistical survey for the 4th Quarter of 2003. The base of respondents consists of economic entities, which are legal entities with at least 10 employees. The survey is complete for economic entities with a number of employees equal or larger than 1000 and selective for the economic entities (firms) with 10 to 999 employees.

The AEIS survey sample comprises of economic entities from various industries (in OKEC classification). For the purposes of AEIS the economic entities have been divided into business and non-business sectors according to the law, which units apply in their remuneration systems. Economic entities applying Act No. 1/1992 Coll. on Wages, Remuneration for Stand-by, and Average Earnings are classified as a business sector, whereas units, which apply Act No. 143/1992 Coll. on Salaries and Remuneration for Stand-By in Budgetary Organizations and some other Organizations and Institutions as amended are classified as a non-business sector. Regarding the number of employees the most represented industries of the business sector in the survey are manufacturing industries and transport, storage and communication. For non-business sector the most represented is a section of health and social work and veterinary activities. From the geographical point of view the AEIS survey captures entire Czech Republic. Following tables show the structure of AEIS sample data set without non response (further sample data set) for the 1st Quarter of 2003 is shown in.

| AEIS sample data set | | | |
|-----------------------------|-----------------|---------------------|-----------------|
| | Business sector | Non-business sector | Total |
| Number of Economic Entities | 2 445 | 616 | 3 061 |
| Number of Employees | 1 055 thousands | 240 thousands | 1 295 thousands |

Table 1

The structure of AEIS sample data set by industry and by region is shown in Table 2 and Table 3, respectively.

| AEIS sample data set by industry (No. of Economic Entities) | | | |
|--|-----------------|---------------------|-------|
| Industry CZ-NACE | Business sector | Non-business sector | Total |
| A,B Agriculture, hunting and forestry, fishing | 320 | 4 | 324 |
| C Mining and quarrying | 27 | 0 | 27 |
| D Manufacturing | 961 | 0 | 961 |
| E Electricity, gas and water supply | 92 | 0 | 92 |
| F Construction | 230 | 0 | 230 |
| G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods | 212 | 0 | 212 |
| H Hotels and restaurants | 38 | 1 | 39 |
| I Transport, storage and communication | 110 | 9 | 119 |
| J Financial intermediation | 81 | 0 | 81 |
| K Real estate, renting and business activities | 236 | 24 | 260 |
| L Public administration and defence; compulsory social security | 3 | 56 | 59 |
| M Education | 18 | 342 | 360 |
| N Health and social work, veterinary activities | 34 | 125 | 159 |
| O Other community, social and personal service activities | 83 | 55 | 138 |

Table 2

| AEIS sample data set by region (No. of Economic Entities) | | | | |
|--|-----------------|-----------------|---------------------|-------|
| NUTS 3 | Region | Business sector | Non-business sector | Total |
| CZ011 | Prague | 350 | 93 | 443 |

| CZ081 | Moravia-Silesia | 250 | 69 | 319 |

Table 3

Sample frame

Economic entities that have been randomly selected into AEIS survey have a duty to provide requested information. The statistical units for AEIS survey are generally employees and they are the units carrying statistical information. The basic database from which the economic entities have been selected into AEIS sample - sample frame – is a Business Register of the Czech Republic (BR). Business Register is described in detail on the web pages of Czech Statistical Office (CZSO) www.czso.cz. For the purposes of establishing whether the economic entity belongs to the business or non-business sector there has been used Budget Information System (ARIS). ARIS contains information on accountancy and financial reporting of all non-profit and public organizations, municipalities, district authorities and voluntary municipalities associations, state financial assets and state fund in the Czech Republic. For detailed information see web pages of Czech Ministry of Finance <http://wwwinfo.mfcr.cz/aris>

The basic AEIS database consists of active economic entities registered in the Business Register employing 10 and more employees, which belong into institutional sectors such as non-financial enterprises, financial or governmental institutions.

Sample

Selection of economic entities into AEIS follows One-Stage Stratified Sampling method (for economic entities with 10 to 999 employees). BR as a basic dataset is divided by:

- Business and non-business sector affiliation
- Regions
- Size
- Industry

Region is defined as a region (NUTS 3) according to Act No. 347/97 Coll. on Constitution. There are 4 categories of size used for further stratification, see Table 4 – Size categories for stratification. Division by industry gives ten industry groups in the business sector and ten industry groups in the non-business sector. The delimitation of particular stratification groups has been conducted on the basis of similarities in the nature of economic activity and employment structure.

There have been selected economic entities in proportion given in advance from each particular section of BR delimitated by corresponding stratification criteria. Economic entities with 1000 employees or more are all included into the survey (sample with probability 1). Economic entities with 10 to 999 employees are selected randomly with unequal probabilities without return. The selection probabilities are given by sampling ratio, see Table 4. The number of economic entities selected is given by actual state of BR at the end of year. The sample of economic entities with 10 to 249 employees is permuted using the method of rotating panel with 9 years periodicity rotation, so that the permutation of all economic entities is done in 9 years.

Selected economic entities stay in the sample for a minimum of one rotation period plus one year necessary for their intake. There is documentation kept for all cases of early rejection from the survey and the reasons (e.g. firm bankruptcy).

| Size categories for stratification | | |
|------------------------------------|---------------------|--------------------|
| Category | Number of employees | Sampling ratio [%] |
| 1 | 10 to 49 | 4,5 |
| 2 | 50 to 249 | 15 |
| 3 | 250 to 999 | 70 |
| 4 | More than 1000 | 100 |

Table 4

Input data for AEIS

The following chapter gives description of data collection for the AEIS sample. There are further information on classifications and nomenclatures and main input items on earnings and time worked.

Data collection

Economic entities which are obliged to provide requested information to AEIS sample provide information on all their employees to authorities of state statistical services. The deadline for delivering the data by respondent is the end of month following the reference period.

Delivered data contain information on both employer and employees. The data are in majority taken directly from pay and personnel evidence information systems, i.e. 90 % of input data to AEIS comes from pay and personnel system of the respondent. As regards a form of data delivery, 3% of the reporting units deliver data on printed form, more then 50% electronically and the rest on diskette.

For the purposes of checking the data there has been made so called “Acquisition program AEIS 2002”. It is available on the web pages of Trexima, www.trexima.cz, in the section *Labour Cost Statistical Information*.

The Acquisition program solves the security of data transfer from the reporting unit to Trexima. For this purposes it uses hybrid encryption with public and private key. The public key is part of an acquisition program installation. The private key is placed on internal server of Trexima. Encrypted data are stored in the S/MIME version 3 file.

Classification and Nomenclatures

AEIS uses standard statistical classifications and nomenclatures (see detailed description on www.czso.cz). As the „Quarterly Survey of Labor Costs“ is a part of the Statistical Surveys Program, the valid statistical classifications and nomenclatures are obligatory for both state statistical services and for reporting

units providing information for survey purposes. AEIS uses following classifications and nomenclatures:

- | | |
|---------|---|
| CZ-ISCO | Classification of occupation; issued by CZSO provision from 22. July 1996 for the purposes of introduction of extended Classification of occupation KZAM-R (62/1996 Coll.). |
| CZ-ICSE | Classification of Status in Employment; issued by CZSO provision from 20. October 1997 for the purposes of introduction of Classification of Status in Employment (90/1997 Coll.). |
| CBBE | Classification of Basic Branches of Education; issued by CZSO provision from 16. July 1998 for the purposes of introduction of Classification of Basic Branches of Education (68/1998 Coll.); last update by CZSO provision from 26. September 2002 on updating Classification of Basic Branches of Education (154/2002 Coll.). |
| CZ-NUTS | Classification of Territorial Statistical Units; issued by CZSO provision from 27. April 1999 for the purposes of introduction of Classification of Territorial Statistical Units (33/1999 Coll.); last update by CZSO provision from 15. June 2001 on updating Classification of Territorial Statistical Units - CZ-NUTS (88/2001 Coll.). |
| CZ.NACE | Industrial Classification of Economic Activities; issued by CZSO provision from 1. December 1993 for the purposes of introduction of Industrial Classification of Economic Activities (77/1993 Coll.); last update by CZSO notification from 26. September 2002 on updating Industrial Classification of Economic Activities (160/2002 Coll.). |
| ČZEM | Classification of Countries issued by CZSO provision from 7. May 1993 for the purposes of introduction of Classification of Countries (44/1993 Coll.); last update by CZSO provision from 6. June 2002 on introduction of geographical areas into the Classification of Countries (101/2002 Coll.). |
| FORMA | Classification of legal form of ownership |

Earnings and time worked

AEIS monitors quarterly the earnings levels in particular occupations according to classification CZ-ISCO. For each employee from selected economic entities in particular reference period (quarter) there are surveyed average hourly earnings which have been calculated for purposes of compensation provided for time not worked in compliance with employment law § 17 Act No. 1/1992 Coll.

Another surveyed pay indicator is earnings information from the beginning of the year till the end of reference period. Earnings are defined as a remuneration for work done in accordance with both §4 Act No. 1/1992 Coll. on Wages, Remuneration for Stand-By and Average Earnings, and with §3 Act No. 143/1992 Coll. on Salaries and Remuneration for Stand-By in Budgetary Organizations and some other Organizations and Institutions as amended, for Business Sector and for

Non-Business Sector respectively. The average hourly earnings represent a short run indicator of pay level, whether the total sum of earnings for work done is used for the purposes of monthly gross earnings calculation. Another indicator of pay level are monthly gross earnings, which are showing the earnings level for the period from the beginning of the year till the end of quarter. In addition to the total amount of earnings the survey gives information on premium and bonuses, overtime payment and other payments.

Besides remuneration for work there are also surveyed other payments in connection with work performance. AEIS estimates compensation for absence and bonuses for stand-by, which are paid in the period from the beginning of the year till the end of reference period. AEIS survey enable to follow the structure of monthly gross earnings, which consist of above mentioned earnings parts - premiums and bonuses, overtime payments and other payments, compensation for absence and bonuses for stand-by.

AEIS observes information on working and non-working time as well. This information is used for the monthly gross earnings calculation. An input record on employee contains information on time worked and number of overtime hours. Further the input record contains total not worked time from the beginning of year, the number of sick leave days and not worked days with compensation. The number of leave days is monitored as well.

Data processing and analysis

The following chapter on data processing and analysis gives an overview of published earnings statistics, methods of calculation of monthly gross earnings and indicators of time worked. It further describes the weighting and estimation used.

Review of published tables

The earnings statistics by CZ-ISCO occupation are main results of the AEIS survey. Table V5 shows average hourly earnings by CZ-ISCO occupation on the level of occupation subgroups (4 digits CZ-ISCO). There are published only occupations, which are represented with at least 1 percentage point in each main occupation group. The information on average monthly gross earnings, structure of the earnings and average time worked for each CZ-ISCO occupation level is given in the Table M5.

Table T5 is structured likewise according to CZ-ISCO levels and it shows average monthly time worked and not worked, proportion of overtime in the total time worked, and proportion of sickness absence and holidays in the total not worked time.

Besides the results by occupation, there are tables showing average hourly earnings and their differentiation by:

- main CZ-ISCO classes of occupation
- occupation categories (manual/non-manual)
- tariff grades
- age
- education
- gender
- industry in CZ-NACE classification
- region

The economic entities are further divided into organization units if it is possible to make an internal disaggregating by districts, where the units have their activity, or by industry in CZ-NACE classification. The results by regions are in this sense obtained by a method known as the workplace approach.

AEIS as a personal information system is a part of public administration information systems. Currently under the guarantee of Czech Ministry of Finance there is prepared implementation of salary information system (ISP) according to Act No. 143/1992 Coll. on Salaries and Remuneration for Stand-By in Budgetary and Some Other Organizations and Institutions. Non-business sector respondents selected into AEIS will gradually hand over the data to ISP and thus the non-business part of AEIS will gradually take over data from ISP. Therefore, there will be changes in the result part structure of AEIS publication according to non-business sector coverage and quality of ISP data.

Calculation of monthly gross earnings

Unlike the average hourly earnings, the second indicator of earnings level – monthly gross earnings – must be calculated from other directly surveyed earnings' items and non-financial performances. However, directly surveyed items contains cumulative amounts only for the period longer than one month, i.e. for quarter till one year. At the same time the employees do not necessary have to be in the evidence for the entire observed period.

Gross earnings are defined as a sum of remuneration for a work, earnings compensation and bonuses for stand-by. Monthly gross earnings of i -th employee are thus calculated as:

$$MGE_i = \frac{EAR_i + STANDBY_i + COMPENS_i}{MONTHS_i}$$

Where :

- MGE_i denotes monthly gross earnings of i -th employee;
- EAR_i denotes earnings for a work of i -th employee in an accumulation from the beginning till the end of reference period (input item of employee record);
- $STANDBY_i$ denotes bonuses for i -th employee stand-by duty in an accumulation from the beginning till the end of reference period (input item of employee record);
- $COMPENS_i$ denotes earnings compensation of i -th employee in an accumulation from the beginning till the end of reference period (input item of employee record);
- $MONTHS_i$ denotes number of months paid for i -th employee, i.e. number of months equivalent to a sum of time worked and time during which an employee has been receiving compensation.

In the case of an employee, who has been working or getting compensation during the entire period observed, the number of months paid $MONTHS_i$ is equal to number of calendar months. If the employee has been in the evidence for time shorter than the period under observation then the number of months paid $MONTHS_i$ is calculated as a proportion of time in the evidence to entire observed period. The number of months paid is calculated in a similar way for employee having other absence than absence with compensation, e.g. in the case of sickness.

Monthly gross earnings for particular groups of employees are calculated as “weighted” gross earnings, where the number of months paid for each particular employee represents the weight. This method of calculation makes it possible to compare correctly both earnings levels of particular occupations and to make comparisons in time.

Together with monthly gross earnings, differentiation and structure of gross earnings, there is as well information on employee's time paid in the AEIS results part. This information shows a number of hours paid per month (time worked and time with compensation). This is consistent with calculation of monthly gross earnings. Information on time worked and not worked (Table T5) is not possible to relate to time paid. Therefore the time worked and not worked and its components are related to the number of months in the evidence.

Despite the fact that since year 2002 the AEIS data collection structure enables to include employees being in the evidence just for a part of observed period into calculations, it is still not possible to involve all employees into calculations. There are following criteria for selection of an employee into calculations:

- employee is paid for at least one month,
- there are selected just employees in the employment status,
- following condition must be fulfilled: sum of time worked and not worked is approximately equal to the number of working days in the period observed,
- just full-time workers are included; full-time job is for the purposes of AEIS defined in compliance with EUROSTAT criteria (at least 30 hours a week).

Weighting method and solution to non-response

Weighting methods used in AEIS make it possible to obtain characteristics of the employment population by using data from the sample. Information on entire employment population is given in weighted aggregate tables. The weight coefficients, which are attached to all economic entities and further to all their employees, are given by initial probabilities of selection of each particular economic entity into the sample. The importance of economic entities with relatively low representation in the sample is increased by using weights in the calculations. The economic entities with 10 to 49 employees are relatively least represented in the AEIS sample file and therefore they have the highest weights in the calculations.

The characteristics of AEIS sample file are given in the Tables P-V5, P-M5, P-T5, P-D1, P-D2, P-D3 and in the tables NP-V5, NP-M5, NP-T5 for business and non-business sectors, respectively. Other Tables in AEIS publication show estimates of basic file characteristics. While interpreting the results one should bear in mind that the characteristics of the sample file do not necessary mean valid estimations for entire labour force. Sample characteristics might be partly influenced by higher relative representation of large economic entities in the AEIS sample file.

The non-response problem, i.e. missing information from selected economic entity, is solved by using a historical imputation method and further by method of correcting weights of economic entities that are equivalent to the unavailable statistical unit in the stratification categories.

Estimation of statistical characteristics

| Group of Tables | Methodology of estimation |
|-------------------------------|---|
| P-V0 to P-V4, P-V6 to P-V9 | Estimated characteristics of average hourly earnings are calculated by using selection weights and weights as a consequence of non-response in the sample dataset. |
| P-M0, P-M1 | Estimated characteristics of monthly gross earnings, the particular parts of earnings and time paid are calculated by using sample dataset, selection weights, non-response weights and weights considering different lengths of not worked non- paid time (sickness, non-paid absence) and time in the evidence. |
| P-V5, NP-V5 | Estimated characteristics of average hourly earnings by occupational subgroups and units are calculated by using the sample dataset. |
| P-M5, NP-M5 | Estimated characteristics of monthly gross earnings and the particular parts of earnings by occupational subgroups and units are calculated by using sample dataset, selection weights, non-response weights and weights considering different lengths of not worked non- paid time (sickness, non-paid absence) and time in evidence. Time paid is calculated in the same way. |
| P-D1 to P-D3 | Estimated characteristics of average hourly earnings are calculated using three-year panel data on the same economic entities from the sample. |
| P-T5, NP-T5 | Estimated characteristics of time worked and not worked by occupational subgroups and units are calculated by using sample dataset and weights, which consider different lengths of time in evidence. |

The AEIS Survey gives information on earnings characteristics and it does not serve a source of information on the number of employees in particular sorting categories. The information on numbers of employees is given in percentage points in aggregate tables. Their purpose is to give an approximation of relative representation of categories published. The information on numbers of employees in the Czech Republic are monitored by surveys conducted by Czech Statistical Office, see www.czso.cz.

Statistical characteristics used in the tables:

| | |
|-------------------|---|
| First decile – D1 | The first decile is defined as the value below which 10% of the smallest values fall. |
| Median | Median is defined as the value of the middle item of a group of values when they are arrayed from smallest to largest. Thus, half of the values is lower than median, half of the values is higher than median. |
| Ninth decile – D9 | The ninth decile is the value with 90% of the values below it and 10% of the highest values above it. |
| Mean | Mean is calculated as a weighted (optionally as simple) arithmetic mean. |

Reliability of estimates (Quality of estimates)

Estimated characteristics are subjects to two types of errors – sampling errors and non-sampling errors. Sampling errors arise randomly through the process of probability sampling. There is not possible to measure the random sampling error from the current AEIS sample. However, the stratification used helps significantly to decrease the random sampling error. Non-sampling errors are in majority caused by low quality of data given by reporting units (i.e. response biases as incomplete or incorrect data). Nevertheless, impact of this kind of errors is decreasing due to multistage monitoring mechanisms and frequent contacts between the firm carrying out the AEIS survey and reporting units.

Definitions

| | |
|--|--|
| Economic Entity | Economic Entity is a legal person or natural person with the status of an entrepreneur registered in the CZSO Business Register. The identification number (IČO) is assigned to each economic entity. |
| Organization Unit (Geographic unit) | From the AEIS point of view the economic entities are divided into organization units according to the district where they perform their economic activity and according to industry (CZ-NACE), to which their economic activity belongs. Organization unit consists of all plants of economic entity, which are located in the same district and belong to the same CZ-NACE category. |
| Reporting Unit | Reporting Unit is a legal person, state's organization unit or a natural person, which is required to provide information for the purposes of statistical surveys according to the Act No. 89/1995 Coll. on the State Statistical Service. |

| | |
|---------------------|---|
| Reference Period | AEIS is a quarterly statistical survey. The quarter for which the statistical survey is conducted is called a Reference Period. The average hourly earnings and number of employees are surveyed as for the reference period, whereas other earnings' characteristics and information on time worked are surveyed as from the beginning of the year till the end of reference period. |
| Period Observed | Period Observed means period from the beginning of the year till the end of relevant quarter (reference period). |
| Business Sector | Statistical units are sorted into Business and Non-business sector according to the law, which units apply in their remuneration systems. For AEIS purposes statistical units have been sorted into a business sector if they apply Act No. 1/1992 Coll. on Wages, Remuneration for Stand-by, and Average Earnings. |
| Non-Business Sector | Statistical units are sorted into Business and Non-business sector according to the law, which units apply in their remuneration systems. For AEIS purposes statistical units have been sorted into a non-business sector if they apply Act No. 143/1992 Coll. on Salaries and Remuneration for Stand-by in Budgetary Organizations and some other Organizations and Institutions. |
| Basic dataset | The basic AEIS dataset consists of active economic entities registered in the Business Register employing 10 and more employees and which belong into institutional sectors such as non-financial enterprises, financial or governmental institutions. |

Other symbols used in the tables in the Results part:

| | |
|------------------|--|
| "out of tariffs" | Category of employees whose earnings are negotiated by employment contract without sorting into tariff grades. |
| "missing" | Category of employees where the code of particular sorting characteristics is missing. |
| "**" | Item of the input data is calculated, but not stated because of insufficient number of input values (min. 3 economic entities and 10 employees). |
